

# ***Annual Drinking Water Quality Report***

## ***Pine Meadow Mutual Water***

### ***2022***

We are pleased to present to you this year's Annual Drinking Water Quality Report. This report is designed to inform you about the quality of the water and the services we deliver to you every day. Our constant goal is to provide you with a safe and dependable supply of drinking water. We want you to understand the efforts we make to continually improve the water treatment process and protect our water resources. We are committed to ensuring the quality of your water. Our water sources have been determined to be groundwater and surface water sources. Our water sources are 4 wells and Mountain Regional Water Special Service District (SSD).

The Drinking Water Source Protection Plan for Pine Meadow Mutual Water is available for your review. It contains information about source protection zones, potential contamination sources, and management strategies to protect our drinking water. Our sources are located in remote and protected areas and have a low level of susceptibility to potential contamination sources. We have also developed management strategies to further protect our sources from contamination. Please contact us if you have questions or concerns about our source protection plan.

There are many connections to our water distribution system. When connections are properly installed and maintained, the concerns are very minimal. However, unapproved, and improper piping changes or connections can adversely affect not only the availability but also the quality of the water. A cross connection may let polluted water or even chemicals mingle into the water supply system when not properly protected. This not only compromises the water quality but can also affect your health. So, what can you do?

Do not make or allow improper connections at your homes. Even that unprotected garden hose lying in the puddle next to the driveway is a cross-connection. The unprotected lawn sprinkler system after you have fertilized or sprayed is also a cross-connection. When the cross connection is allowed to exist at your home, it will affect you and your family first. If you'd like to learn more about helping to protect the quality of our water, call us for further information about ways you can help.

This report shows our water quality and what it means to you, our customer.

Pine Meadow Mutual Water Company (PMMWC) routinely monitors for constituents in our drinking water following the Federal and Utah State laws. The following table shows the results of our monitoring for the period of January 1<sup>st</sup> to December 31<sup>st</sup>, 2022. All drinking water, including bottled drinking water, may be reasonably expected to contain at least small amounts of some constituents. It's important to remember that the presence of these constituents does not necessarily pose a health risk.

In the following table, you will find many terms and abbreviations you might not be familiar with. To help you better understand these terms we've provided the following definitions:

**Non-Detects (ND)** - laboratory analysis indicates that the constituent is not present.

**ND/Low - High** - For water systems that have multiple sources of water, the Utah Division of Drinking Water has given water systems the option of listing the test results of the constituents in one table, instead of multiple tables. To accomplish this, the lowest and highest values detected in the multiple sources are recorded in the same space in the report table.

**Parts per million (ppm) or Milligrams per liter (mg/l)** - one part per million corresponds to one minute in two years or a single penny in \$10,000.

**Parts per billion (ppb) or Micrograms per liter (ug/l)** - one part per billion corresponds to one minute in 2,000 years, or a single penny in \$10,000,000.

**Parts per trillion (ppt) or Nanograms per liter (nanograms/l)** - one part per trillion corresponds to one minute in 2,000,000 years or a single penny in \$10,000,000,000.

**Parts per quadrillion (ppq) or Picograms per liter (picograms/l)** - one part per quadrillion corresponds to one minute in 2,000,000,000 years or one penny in \$10,000,000,000,000.

**Picocuries per liter (pCi/L)** - picocuries per liter is a measure of the radioactivity in water.

**Millirems per year (mrem/yr)** - a measure of radiation absorbed by the body.

**Million Fibers per Liter (MFL)** - a million fibers per liter is a measure of the presence of asbestos fibers that are longer than 10 micrometers.

**Nephelometric Turbidity Unit (NTU)** - nephelometric turbidity unit is a measure of the clarity of the water. Turbidity above 5 NTU is just noticeable to the average person.

**Action Level (AL)** - the concentration of a contaminant which, if exceeded, triggers treatment or other requirements that a water system must follow.

**Treatment Technique (TT)** - A treatment technique is a required process intended to reduce the level of a contaminant in drinking water.

**Maximum Contaminant Level (MCL)** - The "Maximum Allowed" (MCL) is the highest level of contaminant that is allowed in drinking water. MCLs are set as close to the MCLGs as feasible using the best available treatment technology.

**Maximum Contaminant Level Goal (MCLG)** - The "Goal" (MCLG) is the level of a contaminant in drinking water below which there is no known or expected health risk. MCLGs allow for a margin of safety.

**Maximum Residual Disinfectant Level (MRDL)** - The highest level of disinfectant allowed in drinking

water. There is convincing evidence that the addition of a disinfectant is necessary for the control of microbial contaminants.

**Maximum Residual Disinfectant Level Goal (MRDLG)** - The level of a drinking water disinfectant below which there is no known or expected health risk. MRDLGs do not reflect the benefits of the use of disinfectants to control microbial contaminants.

**Date**- Because of required sampling time frames i.e. yearly, 3 years, 4 years, and 6 years, sampling dates may seem outdated.

**Waivers (W)**- Because some chemicals are not used or stored in areas around drinking water sources, some water systems have been given waivers that exempt them from having to take certain chemical samples, these waivers are also tied to Drinking Water Source Protection Plans.

TEST RESULTS							
Contaminant	Violation Y/N	Level Detected ND/Low-High	Unit Measurement	MCLG	MCL	Date Sampled	Likely Source of Contamination
<b>Microbiological Contaminants</b>							
Total Coliform Bacteria	N	ND	N/A	0	Presence of coliform bacteria in 5% of monthly samples	2022	Naturally present in the environment
Fecal coliform and <i>E.coli</i>	N	ND	N/A	0	If a routine sample and repeat sample are total coliform positive, and one is also fecal coliform or <i>E. coli</i> positive	2022	Human and animal fecal waste
Turbidity for Ground Water	N	0.32	NTU	N/A	5	2022	Soil runoff
Turbidity for Surface Water	N	0.55	NTU	N/A	0.5 in at least 95% of the samples and must never exceed 5.0	2022	Soil Runoff  (highest single measurement & the lowest monthly percentage of samples meeting the turbidity limits)
<b>Inorganic Contaminants</b>							
Arsenic	N	2-3	ppb	10	10	2022	Erosion of natural deposits; runoff from orchards; runoff from glass and electronics production wastes
Barium	N	172-262	ppb	2000	2000	2022	Discharge of drilling wastes; discharge from metal refineries; erosion of natural deposits

Cadmium	N	ND-0.2	ppb	5	5	2022	Corrosion of galvanized pipes; erosion of natural deposits; discharge from metal refineries; runoff from waste batteries and paints
Copper a. 90% results b. # of sites that exceed the AL	N	a.346 b.0	ppb	1300	AL=1300	2022	Corrosion of household plumbing systems; erosion of natural deposits
Fluoride	N	394	ppb	4000	4000	2022	Erosion of natural deposits; water additive which promotes strong teeth; discharge from fertilizer and aluminum factories
Lead a. 90% results b. # of sites that exceed the AL	N	a. 2 b.0	ppb	0	AL=15	2022	Corrosion of household plumbing systems, erosion of natural deposits
Nitrate (as Nitrogen)	N	202	ppb	10000	10000	2022	Runoff from fertilizer use; leaching from septic tanks, sewage; erosion of natural deposits
Selenium	N	1-10	ppb	50	50	2022	Discharge from petroleum and metal refineries; erosion of natural deposits; discharge from mines
Sodium	N	12-58	ppm	500	None set by EPA	2022	Erosion of natural deposits; discharge from refineries and factories; runoff from landfills.
Sulfate	N	8	ppm	1000	1000	2022	Erosion of natural deposits; discharge from refineries and factories; runoff from landfills, runoff from cropland
TDS (Total Dissolved solids)	N	292-1516	ppm	2000	2000	2022	Erosion of natural deposits
<b>Disinfection By-products</b>							
TTHM [Total trihalomethanes]	N	ND-7	ppb	0	80	2022	By-product of drinking water disinfection
Haloacetic Acids	N	16	ppb	0	60	2020	By-product of drinking water disinfection
Chlorine	N	0.5	ppm	4	4	2020	Water additive used to control microbes
<b>Radioactive Contaminants</b>							
Alpha emitters	N	ND-9	pCi/1	0	15	2022	Erosion of natural deposits
Combined	N	0.14-0.56	pCi/1	0	5	2022	Erosion of natural deposits
Radium 226	N	0.5	pCi/1	0	5	2022	Erosion of natural deposits
Radium 228	N	0.5	pCi/1	0	5	2022	Erosion of natural deposits

Infants and young children are typically more vulnerable to lead in drinking water than the general population, and there is a possibility that lead levels at your home may be higher than at other homes in the community due to age and materials used in your home's plumbing. If present, elevated levels of lead can cause serious health problems, especially for pregnant women and young children. Lead in drinking water is primarily from materials and components associated with service lines and home plumbing. Pine Meadow Mutual Water is responsible for providing high-quality drinking water but cannot control the variety of materials used in plumbing components. Therefore, if you are concerned about elevated lead levels in your home's water, you may wish to have your water tested and flush your tap for 30 seconds to 2 minutes before using tap water to minimize potential lead exposure. All sources of drinking water are subject to potential contamination by constituents that are naturally occurring or manmade, such as microbes, organic or inorganic chemicals, or radioactive materials. It's important to note that all drinking water, including bottled water, may reasonably be expected to contain at least small amounts of some contaminants. However, the presence of contaminants does not necessarily indicate that the water poses a health risk. More information about contaminants and potential health effects can be obtained by calling the Environmental Protection Agency's Safe Drinking Water Hotline at 1-800-426-4791 or <http://www.epa.gov/safewater/lead>

MCLs are set at very stringent levels. To understand the possible health effects described for many regulated constituents, a person would have to drink 2 liters of water every day at the MCL level for a lifetime to have a one-in-a-million chance of having the described health effect.

Some people may be more vulnerable to contaminants in drinking water than the general population. Immunocompromised persons such as persons with cancer undergoing chemotherapy, persons who have undergone organ transplants, people with HIV/AIDS or other immune system disorders, some elderly, and infants can be particularly at risk from infections. These people should seek advice from their healthcare providers about drinking water. EPA/CDC guidelines on appropriate means to lessen the risk of infection by cryptosporidium and other microbiological contaminants are available from the Safe Drinking Water Hotline (800-426-4791).

We value our customers at Pine Meadow Mutual Water, and we are committed to providing them with high-quality water around the clock. We believe that protecting our water sources is crucial for the well-being of our community and the future of our children. If you have any questions about your water utility or would like more information about this report, please do not hesitate to contact Brody Blonquist at 801-461-0171. We want to keep our customers informed about their water supply, and we encourage you to attend our regularly scheduled meetings, held on the second Thursday of every month at 6:30 pm at 1567 W Arapaho Dr. in the gravel pit.

We appreciate your continued support.

Brody Blonquist
